- Transaction through escrow protocol
- P2P and OTC, escrow system
- CEX, DEX Exchange
- White label
- KYC, 2FA
- API

# Case Studies

# Coinstox

## Platform

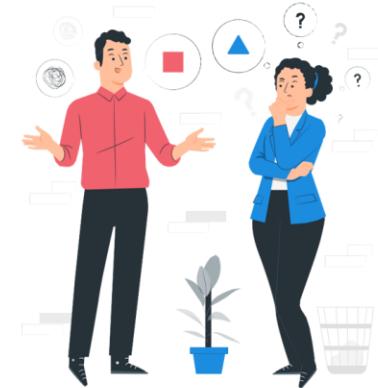

[coinstox.io](https://coinstox.io)

The decentralized crowdfunding portal  
for start-ups, entrepreneurs, businesses  
& investors.

Coinstox is a DeFi crowdfunding platform that enables startups and entrepreneurs to generate capital fast, intelligent and transparent in exchange of crypto tokens.

## Problems

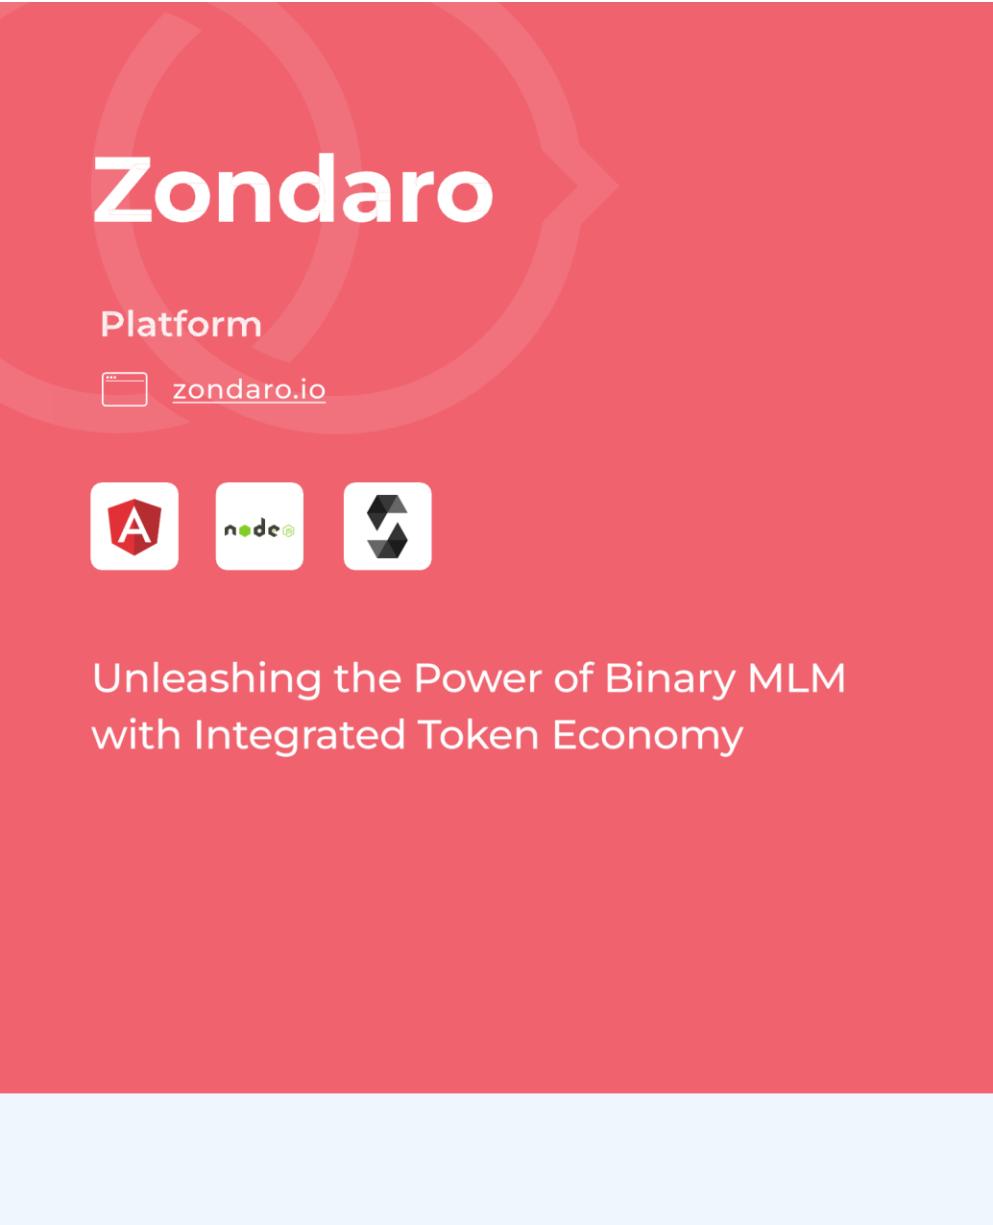

- A crypto-based crowdfunding solution/problem
- Provide a secure and decentralised platform for raising funds
- A transparent and easy way to raise funds and to invest in different opportunities

## Solutions

- Cointox is a decentralised crowdfunding platform that allows entrepreneurs and startups to tokenise their idea, thereby generating fast capital in exchange of crypto tokens.
- Entrepreneurs receive funds for their project without involvement of any financial institutions as they interact with direct investors.
- Investors seek out potential and promising projects which are aiming to grow by investing with crypto at an early stage and unlock benefits along with receiving project tokens against their investment.

The image shows a red-themed landing page for 'Zondaro'. At the top left is the 'Zondaro' logo in white. Below it is the word 'Platform' and a 'zondaro.io' link. Underneath are icons for Angular, Node.js, and MongoDB. The main text reads: 'Unleashing the Power of Binary MLM with Integrated Token Economy'.

## Problems

- Develop a secure and decentralized Binary MLM system that empowers users to acquire and utilize platform tokens.
- Ensure user-friendliness, accessibility, and ease of starting the system.
- Implement mechanisms for users to earn passive income within the MLM system.
- Provide seamless user experience with instant and secure payments and withdrawals.

## Solutions

- Development of a web-based Binary MLM plan.
- Creation of Internal Tokens and Crypto tokens based on the Tron blockchain.
- Inclusion of features such as a digital wallet, staking, and selling options.
- Facilities for bulk transfer and bulk user entries.
- Implementation of support ticket management.
- Initial launch with Presale website and primary token release.
- Secondary release introducing the main platform with additional features.
- Offering different plans for users to enter the MLM system.
- Integration of a referral system.

# Cubix

## Platform

[cubixpro.io](https://cubixpro.io)

[cubixpro.world](https://cubixpro.world)

Cubix app

Cubix is an NFT-based fantasy sports Platform.

## Problems

- Predominance of Bots: Many games heavily rely on Bots, which play against real users and aim to generate profits, creating an unfair and imbalanced gaming environment.
- Lack of Transparency: Current sports fantasy platforms suffer from a significant lack of transparency, providing minimal or almost no visibility into the underlying processes and operations, raising concerns of fairness and integrity.

## Solutions

- Cubix brings NFTs of sports players, offering 10k copies of each player.
- Users can participate in fantasy sports games by purchasing or renting player NFTs.
- Cubix utilizes NFTs and crypto tokens, providing real utility to users.
- The platform includes multiple products: Cubix NFT Marketplace, Fantasy Platform, Cubix Wallet, and Prediction games.

# Cyborg

## Platform

Cyborg app

To boost users' funds and help escalate their profits by performing transactions driven by proven algorithms and strategies.

## Problems

- Create an app that provides efficient crypto trading.
- Allow users to create their own trading strategy.
- Provide a platform for strategy builders to earn commissions if someone uses their strategy for trading.
- Enable users to use trading strategies on the platform.

## Solutions

- Cyborg a mobile developed under iOS and android versions is developed to boost users funds and help escalate their profits by performing transactions driven by artificial intelligence.
- This being a self intelligent app monitors the market trends by the algorithm written and perform buy-sell actions on behalf of users on the bound exchanges.
- This app helps users reduce their continuous involvement in trading instead it uses self-acting algorithms which monitors market trends, calculates up- downs and carry out buy-sell of cryptocurrencies.
- Users can relax and just collect their gained profits in clicks with the help of studying successful strategies.

The image shows a landing page for the Toksi app. At the top left is the Toksi logo. Below it, the word "Platform" is displayed above two icons: a computer monitor with the URL "toksi.io" and a smartphone with the text "Toksi app". A horizontal row of six technology logos follows: Angular, React, Node.js, Flutter, GraphQL, and Dart. At the bottom left, the text "Value-adding tokenized taxi app" is visible.

## Problems

- Create a tokenized platform for cab hailing services
- Provide different programs for both riders and drivers to earn rewards
- Provide a presale platform and ways to utilise Toksi tokens on platform

## Solutions

- Toksi offers a mobile app for Riders and Drivers, along with a web solution for presale and Admin management.
- The Rider and Driver app features an easy-to-use interface, live tracking, and chat functionality.
- Introduction of Toksi utility NFTs, vehicle-bound NFTs that serve as proof of ownership and are digitally linked to Toksi's green vehicles.
- Implementation of the Toksi Referral program to encourage app adoption.
- Users have the opportunity to Ride2earn Toksi tokens as rewards, while Drivers can participate in a similar program to earn tokens through driving.
- Users are also provided with ride credits, which can be utilized for payment. Also solution includes Staking pools.

# Chainpals

## Platform

[chainpals.io](https://chainpals.io)

Your Pal on Web3 Payments - With Chainpals you can send and receive crypto payments with safety.

Chainpals is the platform that helps you to carry out your crypto payments securely. You can do instant transactions or milestone-based transactions with Chainpals.

## Problems

- Insecurity And Fear Of Fraud while making payment
- For larger crypto payments, the lack of platforms supporting legal contracts and written proof with terms and conditions poses a challenge.
- Enable milestone-based payments for larger amounts, reducing risk, and addressing the challenge of implementing them in crypto transactions.

## Solutions

- Chainpals introduces a unique smart contract-based platform for instant payments, eliminating insecurity and fraud concerns.
- Payments made to the smart contract are securely stored within it.
- Automatic release of payment occurs after a pre-defined period if no disputes arise.
- Disputes are resolved through the assistance of the escrow manager, ensuring a fair resolution.
- The platform offers milestone-based payments for larger transactions, providing peace of mind to buyers.
- Buyers can upload terms and conditions, define payment milestones, and have the option for a secure transaction.
- The system includes a Presale platform, Staking feature, Referral system, and Support chat for enhanced functionality and user support.
